REPLACEMENT CLAIMS

- 2. (amended) The method of claim 8 wherein the wet oxidation process is performed at a temperature in a range of about 450 °C to about 750 °C.
- 3. (amended) The method of claim 8 wherein the wet oxidation process is performed at a temperature in a range of about 750 °C to 950 °C.
- 4. (amended) The method of claim 8 wherein the oxidation process is carried out for a duration in a range of about 20 to about 60 seconds.
- 5. (amended) The method of claim 8 wherein subjecting the dielectric film to a wet oxidation includes heating a mixture of hydrogen and oxygen gases wherein the ratio of hydrogen to oxygen gases in the mixture is in the range of about 0.1 to about 0.5.
- 6. (amended) The method of claim 8 wherein subjecting the dielectric film to a wet oxidation includes heating a mixture of hydrogen and oxygen gases wherein the ratio of hydrogen to oxygen gases in the mixture is in the range of about 0.1 to about 0.8.
 - 8. (amended) A method of fabricating a semiconductor device comprising:

depositing an oxygen-deficient dielectric film having a dielectric constant of at least about 25 over an underlying layer;

subjecting the dielectric film to a wet oxidation in a rapid thermal process chamber at a temperature of at least about 450 °C and for a duration which increases the oxygen content of the dielectric film; and

subjecting the dielectric film to a heat treatment in an ambient comprising a stabilizing gas selected from the group consisting of N_2 , O_2 , O_3 , NO, and N_2O .

10. (amended) The method of claim 8 wherein subjecting the dielectric film to a heat treatment in an ambient comprising a stabilizing gas is performed prior to subjecting the film to the wet oxidation.

- 11. (amended) The method of claim 8 wherein the wet oxidation is performed at a temperature less than the temperature for subjecting the dielectric film to a heat treatment in an ambient comprising a stabilizing gas.
- 12. (amended) The method of claim 8 wherein subjecting the dielectric film to a heat treatment in an ambient comprising a stabilizing gas is performed in the rapid thermal process chamber.
